1. Introduction

The TCG Dragon Cave Club (DCC) is an NFT collection consisting of 10,000 Dragons minted on the blockchain for the TCG World Metaverse.

1.1 TCG Dragon Cave Club NFT

The TCG Dragon Cave Club NFT is your VIP membership access to the Dragon Cave, a hidden lair inside TCG World Metaverse. Membership will also grants access to exclusive events.

The TCG Dragon Cave Club collection can be found on opensea, make sure you are viewing the 10k collection with a verified blue tick!

<https://opensea.io/collection/tcg-world-dragons>

1.2 Dragon Legacy

In the thrilling saga of the TCG World Metaverse, the electrifying bond between Dragons and Avatars propels the evolution of its sprawling landscapes and inhabitants. At its core lies the awe-inspiring tale of the Dragon Elders, wielders of the cosmic Aether, whose ancient sorcery ignited the very essence of TCG World. With each pulse of their magic, the land sprang forth, infused with elemental energy bestowed by the slumbering Primordial Sentient Dragons.

But the pulse races with the cataclysmic Continental Crash, a seismic event that not only reshaped the world's terrain but also roused the dormant giants from their celestial slumber. As the Primordial Dragons awoke, a new era dawned—the era of the Dragon Cave Club—a fellowship forged in fire and destiny. Their legacy ignited the rise of a new generation of Dragons, bound by clan and alliance, united with the enigmatic Avatars in a dance of symbiosis and power.

From this crucible of destiny emerges an era of unprecedented prosperity and unity. Dragon Trainers rise, forging unbreakable bonds with their scaled companions, their journey culminating in the coveted heights of Dragon Island, where legends are born and champions crowned. Yet, even as the world thrives, the echoes of ancient mysteries beckon, whispering secrets that stir the hearts of all who dare to seek them.

In the pulsating heart of TCG World, where baby Dragons frolic under the watchful eyes of their Guardians, players and Avatars unite on quests of epic proportions. Together, they unravel the lineage of these majestic creatures, weaving their destinies amidst the tapestry of adventure that unfolds across TCG World, Dragon Island and beyond.

Welcome to the immersive realm of the TCG World Metaverse, where every moment brims with excitement and every battle sparks with the thrill of conquest. As players traverse this vibrant digital universe, they unlock the full extent of their potential, shaping the very fabric of destiny alongside their loyal Dragon companions.

1.2.1 Dragon Clans

“Aifos the Goddess” of the Sakura Valley Clan

In the picturesque Sakura Valley dwelled Aifos, a Dragon Goddess of unrivaled majesty. Aifos had the unique ability to wield the energy of the region's massive volcano, manipulating its lava and molten rock to sculpt the landscape to her will. Her capability to communicate with fellow Dragons bolstered her rule, ensuring her dominance across the territory. Aifos stood as a beacon of strength and nobility, her presence bringing both protection and esteem to the Sakura Valley Clan.

“Boreas the Blue” of the Northern Tundra Clan

Inhabiting the frostbitten expanse of the Northern Tundra, Boreas the Blue thrived amidst snow-blanketed landscapes and icy lakes. His substantial body mass, an adaptation to the bitter cold, insulated him from the harsh climate. In this icy domain, Boreas mastered the elemental forces of Water, Ice, and Snow. Legend has it that Boreas stands guard over a secret Dragon Cave, rumored to be hidden within the Northern Tundra. Said to house ancient artifacts, treasures, and mysteries, the cave has lured countless adventurers seeking fortune and fame. Respected by all who encountered him, Boreas's presence served as a testament to the enduring might of the ancient Dragons.

“Phaedra the Swift” of the Los Solaris Clan

Phaedra the Swift, a Dragon of remarkable power and wisdom, made her home within the vast desert. Her mastery over electricity was unparalleled; she moved through the scorching sands with lightning-charged precision, her speed unmatched and unhindered by the desert's relentless heat. Over time, her form evolved to mirror the sun's golden glow, allowing her to merge seamlessly with her surroundings and deflect the harsh sunlight with radiant ease. Phaedra, a virtuoso of stealth and a skilled predator, commanded the desert with her swiftness and dexterity. Her tale is a testament to the virtues of bravery, endurance, and the ingenious ability to thrive against the odds.

“Gaia the Grand” of the Emerald Forest Clan

Gaia the Grand, a magical Dragon residing in the lush Emerald Forest biome, mastered the use of the area's varied flora for both offense and healing. Gaia's unique ability to harness toxic plant gases and spores as weapons and healing herbs for regeneration, coupled with an immunity to these toxins, distinguished Gaia as the region's most formidable poison-based Dragon. This mastery, used to safeguard the forest's inhabitants, earned Gaia the admiration and love of all as the region's most honored guardian.

2. Dragon Tiers

Dragons available for use in the game span different stages of development, with the smallest dragons being provided to every participant in TCG World. However, to control Dragons at other stages, players must possess a minimum number of DCC NFTs.

2.1 Baby Dragons

The delightful Baby Dragon represents the most youthful addition to the TCG Dragon lineage, granted freely to all new TCG account registrants without the requirement of owning any DCC NFTs. Upon entering TCG, players have the privilege of selecting one from four regional Baby Dragons: Sakura Valley, Northern Tundra, Los Solaris or Emerald Forest, each with unique traits. Feeding these Baby Dragons with an assortment of TCG foods, including fish and fruits farmed within the game.

Securing Your Baby Dragon

To secure a Baby Dragon, players embark on a quest involving the collection of Dragon-specific items and exploring TCG World's marvels to accomplish certain tasks. This journey leads to the magical emergence of your Baby Dragon at level 0. It welcomes you into the world, offers a comprehensive care and leveling guide, and sets the goal of reaching level 10 for NFT minting.

Dragon Progression Phases

Elevating your Baby Dragon requires fulfilling daily missions and engaging in quests to gather materials such as dragon essence, bones, and blood.

Enhancement Strategy

Beginning at level 0, the Baby Dragon can ascend one level every three days by completing daily missions, aiming for a peak of level 10 in a 30-day span for NFT conversion. Post reaching milestones every 10 levels up to a maximum of 120, it's safeguarded against regression below these benchmarks. Leveling rewards encompass emotes, gear, with peak rewards granting access to the VIP Baby Dragon Cave, an increase in stats, and a distinctive Baby Dragon go-kart.

Caring for Your Baby Dragon

Up to four Baby Dragons can be actively leveled in the game's four "Slots," with a point system rewarding care activities. Points are allotted as follows: +25 for each meal (up to four daily, maxing at 100 points), +50 for each drink (two daily, totaling 100 points), +5 per sleep hour (8-10 hours daily, yielding 40-50 points), +50 for bathing (once daily), and +25 for a 10-minute walk (twice daily, summing to 50 points). Neglect penalties include: -25 points for each missed meal, -50 for lack of water, a sleep deficit deduction of -2 points per hour (capped at -20, with an additional -20 for exceeding 10 hours of missed sleep), -25 for skipping baths after two days, and -10 for each forgone walk (up to -20 daily). The daily potential loss is 285 points, with any parameter's depletion causing fainting.

Revival Protocols

A 10-day neglect necessitates revival at a center, deducting 200 points from accumulated levels. This six-hour lock can be shortened to two hours at a Dragon Nest, possibly incurring a \$TCG2 fee, except for Dragon Nest holders who revive for free. Leveling the first Baby Dragon to 10 unlocks a second quest slot, propelling players into collecting more Dragon items and exploring key locales for the second Baby Dragon's birth.

Advancement and Restrictions

Each advancement level necessitates 1,000 points, with a daily cap of 350 points achievable through care tasks. Quest completion is mandatory for each new Baby Dragon quest, disallowing the bypass through higher-level Dragon purchases. A bought Baby Dragon can be elevated to its maximum level but won't qualify for unlocking subsequent quests. Quests adhere to a sequential and level-dependent framework for a structured advancement journey.

A purchased Baby Dragon can be leveled up to its maximum level, but it cannot be used to unlock other Baby Dragon Quests.

2.2 Tier 1 - Hunter Dragon

The Hunter Dragon, known as a Tier 1 Dragon, strikes a perfect balance between cuteness and strength, requiring only one DCC NFT to be activated. In the world of TCG, this Dragon serves as a loyal companion, assisting players by seeking out and battling Sprites. Additionally, the Hunter Dragons come along with four region-specific firebreath types. Accessories for the Hunter Dragon, or Tier 1 Dragons, can be obtained through crafting or by transactions in the Dragon Marketplace with Dragon Gold, or through the TCG Store offering opportunities for personalization.

2.3 Tier 2 - Raider Dragon

The Raider Dragon — recognized within the game as a Tier 2 Dragon—offers the distinct capability to transport players across the game's landscape on its back. This feature not only enhances the gaming experience through exhilarating travel but also aids in the strategic collection of Regional Artifacts, thanks to its integrated artifact radar, a unique attribute of this Dragon. Additionally, the Raider Dragon is equipped to carry extra in-world items, expanding its utility for players. Additionally, the Raider Dragons come along with four region-specific firebreath types. To unlock the multifaceted abilities of the Raider Dragon, players must secure two Dragon Cave Club (DCC) NFTs, granting them access to its advanced features and support in their adventures.

2.4 Tier 3 – Battle Dragon

To activate a Tier 3 Battle Dragon, players must collect four Dragon Cave Club (DCC) NFTs. Built for combat, these Dragons combine powerful offense, strong defense, and special abilities, along with four region-specific firebreath types.

Whether battling Sprites, Dragons in the open world, or competing in Arenas and Tournaments, Battle Dragons thrive in high-stakes encounters. Players can freely choose their combatants, enabling strategic matchups to suit their playstyle.

2.5 Tier 4 – Flying Dragon

In this tier, players gain the ability to mount and ride the Flying Dragon. To unlock the Flying Dragon, identified as a Tier 4 Dragon, players are required to have eight Dragon Cave Club (DCC) NFTs. This tier allows the player to ride the Flying Dragon, offering a novel and swift mode of transportation across the skies of TCG World. Additionally, the Flying Dragon wields powerful airborne abilities and four distinct firebreath variations, each tied to its region of origin—crucial assets during flight-based challenges.

2.6 Tier 5 – Mythic Flying Dragon

In this tier, players have the privilege of riding the Mythic Dragon. A total of 40 Mythic Dragons (Tier 5) exist, with each region being home to 10 of these majestic creatures. They can be acquired through one of three methods:

1. Use a top ten DCC NFTs, as ranked by ranknft.io, alongside 7 other DCC NFTs will automatically qualify as Mythic Dragons.
2. Assembling a complete set of the 11 TCG Traits in 10 DCC NFTs. However, this method is constrained by the rarest trait, the TCG Mouth, of which there are only 22. Removing the second-ranked Dragon possessing the TCG Mouth leaves 21 slots for forming the complete set.
3. The remaining 9 Mythic Dragons are attainable through an annual nesting event, spread over nine years from launch.

Similar to the Flying Dragon, players can ride on the back of the Mythic Dragon for aerial exploration of TCG World, offering a distinct and rapid mode of travel within the Metaverse. The Mythic Dragon commands unparalleled aerial prowess and unleashes four colossal, region-specific firebreath variations—the most powerful and impressive of all—making them essential during high-stakes flight challenges.

2.7 In-Game Dragon Activation

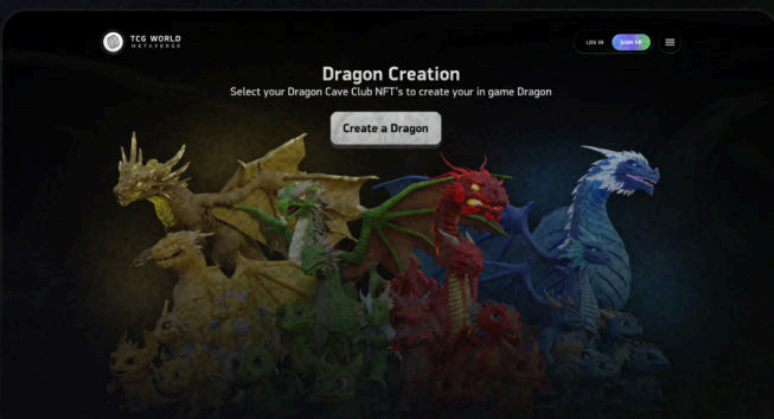

Dragons within the game are unlocked when their respective slots are filled with the necessary quantity of DCC NFTs: one for the Hunter Dragon, two for the Raider Dragon, four for the Battle Dragon, and eight for the Flying Dragon. These slots need to stay occupied to maintain access to the Dragons. If any DCC NFTs are taken out or sold, they must be replenished to regain access to the corresponding Dragon.

Players who prefer mixing regions and tiers can mint individual Dragons using different DCCs for each in-game Dragon.

2.7.1 Dragon Family Minting

Players also have the option to use Family Minting, a valuable method for unlocking multiple in-game Dragons—provided all are from the same region. With this approach, filling the required number of DCC NFTs for a specific Tier grants that Dragon plus all lower-tier Dragons from the same region. For example, using two DCCs unlocks both a Tier 2 Raider and a Tier 1 Hunter. Similarly, using four DCCs grants access to a Tier 3 Battle Dragon, along with the Raider and Hunter Dragons beneath it.

By filling all 8 slots with DCC NFTs, players unlock Tier 1–4 Dragons from one region. And for those holding a TCG Mythic—by combining 10 DCCs, each with a TCG Trait—they'll unlock the full set of Tier 1–5 Dragons from the same region.

3. Dragon Rank System

Each Dragon Collector's Club (DCC) NFT is assigned a Rank and Rarity Score based on its unique traits, grouping it into a specific Rarity Category (refer to the accompanying table for details). Ownership of higher-ranked DCC NFTs grants access to additional benefits. The most accurate representation of these ranks can be found at RankNFT.io, available at RankNFT.io. Note: Baby Dragon's do not have a rarity.

The rarity of in-game Dragons, such as Hunter, Raider, Battle, and Flyer types, is calculated based on the combined Rarity Scores of the Dragon traits. The sum of individual Rarity Scores for each DCC NFT, as listed on RankNFT.io, determines a Dragon's in-game rarity, which in turn influences the amount of Dragon Gold it generates (for detailed tables, see below).

Rank	DCC NFT Rarity	DCC NFT Rarity Scores
Rank 1 - 10	Mythic Dragons	26506.25 - 278.66
Rank 11 - 100	Legendary Dragons	276.94 - 222.02
Rank 101 - 500	Epic Dragons	213.83 - 116.17
Rank 501 - 2000	Rare Dragons	116.09 - 66.32
Rank 2001 - 5000	Uncommon Dragons	66.31 - 53.09
Rank 5001 - 10000	Common Dragons	53.09 - 37.23

Dragon Gold is awarded to each DCC NFT according to its rank. Dragons can accumulate this gold as their treasure or exchange it for various rewards and enhancements through one of the four Dragon Marketplace Vendors: Dragon Trainer, Dragon Fitter, Dragon Vendor, or Dragon Trader.

For assembling a Tier 2-4 Dragon combination, the Dragon Gold from all included DCC NFTs is aggregated, with additional bonuses outlined in subsequent sections, to calculate the total in-game Dragon Gold (Tier 4 - Flyer, Tier 3 - Battle, Tier 2 - Raider, and Tier 1 - Hunter Dragon). The in-game rarity of Raider, Battle, and Flyer Dragons is determined by the cumulative Rarity Score of the Dragon traits, influencing their Dragon Gold allocation. Note: The Dragon gold is linked to the DCC NFT in which it came from and can only be used on the in-game Dragon it is linked with.

4. Dragon Leveling, Mastery Trees and Moves

In the Dragon progression system for TCG World, each Dragon across Tiers 1-5 starts with base stats reflective of its rarity. As Dragons gain experience and ascend in levels, they are awarded skill points — one for each level achieved. These skill points are crucial for navigating the expansive Mastery Trees associated with each Dragon type: Hunter, Raider, Battle, Flying and Mythic Flyer, encompassing branches from the diverse regions of TCG World: Asia, East, North, and Forest. This system allows for a personalized stat and skill enhancement path, deepening the strategic element of Dragon development.

Mastery Trees and Regional Integration

The Mastery Trees offer a wide array of nodes that players can unlock using skill points. Nodes not only provide stat increases but also unlocks unique abilities, boosts or moves, making each Dragon's journey distinct. The integration of the four TCG World regions into the Mastery Trees adds a layer of strategic depth, encouraging players to tailor their Dragons' growth to their preferred gameplay style and geographic preferences.

4.1 Hunter Dragon

Tier 1 Hunter Dragons are initially outfitted with fundamental base stats including HP (Health Points), Speed, Attack, Defense, Stamina, Heal and Shield. These critical attributes, which are pivotal for their performance in battles, are significantly influenced by the Dragon's Rarity as outlined in the Dragon Rank System section. Players are motivated to enhance their Dragons' foundational stats by advancing their levels, a process that rewards them with a Dragon Skill point with each level-up achieved by their in-game Dragon. This newly acquired Dragon Skill point can then be allocated within the Mastery Tree, which is organized into four distinct regional branches. This strategic allocation allows for the tailored development and strengthening of the Dragons' abilities, aligning with the players' tactical approaches and game-play strategies.

By assigning Skill points to specific nodes within the Mastery Tree, players can significantly enhance their Hunter Dragon's combat effectiveness. For example, increasing Health boosts the Dragon's durability in battle, while Speed enhances agility in both exploration and combat. Attack and Defense improve damage output and resistance, respectively. Stamina extends activity time, Heal accelerates recovery, and Shield absorbs incoming damage, protecting HP and increasing overall survivability.

Additionally, the Mastery Tree provides opportunities to unlock advancements such as Sprite Radar enhancements for better environmental awareness and unique attack moves specific to the end of each branch. These enhancements further tailor the Dragon's skill set to the player's strategy, ensuring a more dynamic and personalized gameplay experience.

4.1.1 Hunter Dragon Battle Moves

4.1.2 Sakura Valley Hunter Dragon Battle Moves

Speed	Smoke Claw
Attack	Blow Torch
Defense	Armoured Deflection
Shield	Ember Rain
Healing	Essential Cure
Stamina	Deferred Strike

4.1.3 Emerald Forest Hunter Dragon Battle Moves

Speed	Vine Smash
Attack	Poison Swipe
Defense	Leaf Shield
Shield	Laser Pulse
Healing	Mother's Nurture
Stamina	Biota Blitz

4.1.4 Los Solaris Hunter Dragon Battle Moves

 Speed	 Quick Punch
 Attack	 Tumble Weed Spike
 Defense	 Sand Kick
 Shield	 Static Hit
 Healing	 Vital Remedy
 Stamina	 Rapid Bolt

4.1.5 Northern Tundra Hunter Dragon Battle Moves

 Speed	 Ice Punch
 Attack	 Wing Ice Arrow
 Defense	 Snow Blast
 Shield	 Snowball Barrage
 Healing	 Holy Salvation
 Stamina	 Reaping Velocity

4.1.6 Hunter Dragon Sprite Radar

The Hunter Dragon possesses a Sprite Radar that can detect the nearest Sprite. The effectiveness of the radar, including its active duration and the cooldown time between uses, is influenced by its level, rarity, and any enhancements applied.

4.2 Raider Dragon

The starting base stats of the Tier 2 Raider Dragon are shaped by its Rarity, as outlined in the previously mentioned "Dragon Rank System." This Dragon's abilities encompass the following set of attributes: Health Points (HP), which bolster the Dragon's total health for increased damage resilience; Speed (SPD), improving its mobility across the terrain and in combat; Stamina (STA), expanding its endurance for prolonged activities and quicker recovery; Agility (AGI) – Enhances the Dragon's maneuverability, improving dodging, quick turns, and fluid movement in dynamic situations. Inventory (INV) – Expands the Dragon's carrying capacity, allowing it to hold more items, resources, or loot during travel and missions.

Players are motivated to enhance their Dragons' foundational stats by advancing their levels, a process that rewards them with a Dragon Skill point with each level-up achieved by their in-game Dragon. This newly acquired Dragon Skill point can then be allocated within the Mastery Tree, which is organized into four distinct regional branches. This includes unlocking stat boosts, artifact radar enhancements, and culminating in significant Mega stat boosts. This strategic allocation facilitates the customized enhancement and fortification of the Dragons' abilities, ensuring they align seamlessly with the players' tactical approaches and game-play strategies. Such enhancements significantly augment the Dragons' prowess, not only in their capacity to navigate and explore the world but also in their ability to discover artifacts and excel in Raider Dragon Races.

4.2.1 Raider Dragon Artifact Radar

The Raider Dragon possesses a Artifact Radar that can detect the nearest Artifact. The effectiveness of the radar, including its active duration and the cooldown time between uses, is influenced by its level, rarity, and any enhancements applied.

4.3 Battle Dragon

Tier 3 Battle Dragons are initially outfitted with essential attributes such as HP (Health Points), Speed, Attack, Defense, Stamina, Heal and Shield. The foundational Base Stats of these dragons are determined by their Rarity, a concept detailed in the Dragon Rank System section. Within the gameplay, the Battle Dragon's Mastery Tree plays a crucial role, being segmented into four distinct regional branches. Each branch leads to unique enhancements, starting from basic moves and stat improvements and culminating in potent special moves specific to each region.

The Mastery Tree enables players to significantly enhance their Battle Dragons' combat capabilities through careful allocation of points to various attributes. For instance, investing points into Health Points boosts the Dragon's vitality, making it more resilient to damage. Enhancing Speed improves its agility both in exploration and combat scenarios. Increasing the Attack attribute allows the Dragon to deliver more powerful blows to adversaries, while a higher Defense means better resistance against enemy attacks. Boosting Stamina enhances the Dragon's endurance for longer activities and quicker recovery, and improving the Shield attribute fortifies its defense by absorbing damage, thus preserving HP and enhancing battle durability. Additionally, upgrading the Heal attribute enables the Dragon to recover health over time, increasing its survivability during extended encounters.

From the outset, players have access to basic moves via the first nodes of the Mastery Tree. As they progress, the Tree offers a tailored collection of specialized moves within its four regional branches, enabling strategic selection and use of these abilities to gain a competitive edge in battles. This structure promotes thoughtful planning and strategic game-play, encouraging players to exploit these advanced moves to maximize their Battle Dragons' effectiveness in combat situations.

4.3.1 Battle Dragon Moves

4.3.2 Sakura Valley Battle Dragon Moves

Speed	Smoke Charge
Attack	Lava Rain
Defense	Shield Retaliation
Shield	Fire Storm
Healing	Essential Cure
Stamina	Deferred Strike

4.3.3 Emerald Forest Battle Dragon Moves

Speed	Bio-Sphere Bash
Attack	Blades of Bane
Defense	Gaia's Revenge
Shield	Toxic beam
Healing	Mother's Nurture
Stamina	Biota Blitz

4.3.4 Los Solaris Battle Dragon Moves

 Speed	 Fist of Fury
 Attack	 Forsaken Wound
 Defense	 Dust Storm
 Shield	 Lightning Bolt
 Healing	 Vital Remedy
 Stamina	 Rapid Bolt

4.3.5 Northern Tundra Battle Dragon Moves

 Speed	 Ice Blade
 Attack	 Blizzard
 Defense	 Iceberg Shield Wall
 Shield	 Glacial Glove
 Healing	 Holy Salvation
 Stamina	 Reaping Velocity

4.4 Flying & Mythic Flying Dragon

The foundational Base Stats of both the Tier 4 Flying Dragon and the Tier 5 Mythic Flying Dragon are heavily influenced by their Rarity, as previously detailed in the "Dragon Rank System" section. Among these, the Mythic Flying Dragon stands out with the highest initial base stats, setting a formidable starting point for players. These Dragons are characterized by a range of attributes including Speed, Stamina, Attack, Defense, Shield, Heal and HP. As players advance their Dragons in level, they earn skill points that can be allocated within a comprehensive Mastery Tree, divided into four regional branches. This strategic distribution allows for the unlocking of various enhancements, ranging from stat increases, special moves and sprite radar capabilities, all of which evolve with the player's progression and choices towards upgraded abilities. These enhancements play a crucial role in augmenting the Dragon's capabilities in exploration, Dragon Racing, and Sprite detection tasks.

Allocating points towards Health Points boosts the Dragon's resilience, enabling it to sustain more damage. Boosting Speed enhances the Dragon's agility in both the world and combat, while also giving it a racing advantage. The Heal attribute allows gradual health recovery. Improving the Attack attribute escalates the Dragon's offensive power against adversaries, while a higher Defense ensures better protection from enemy strikes. Elevating Stamina improves the Dragon's endurance for prolonged activities and quicker recovery times, and bolstering the Shield attribute strengthens its defensive mechanisms by absorbing impacts, thus safeguarding HP and improving overall battle and racing durability. Heal attribute enables the Dragon to recover health over time

4.4.1 Flying Dragon Sprite Radar

The Flying and Mythic Dragon possess a Sprite Radar that can detect the nearest Sprite. The effectiveness of the radar, including its active duration and the cool down time between uses, is influenced by its level, rarity, and any enhancements applied.

4.4.2 Flying Dragon Firebreathe

The Flying Dragon wields a powerful fire breath ability, with each of the four regions granting its own distinct elemental variation. This fire breath can be used freely during normal exploration and travel throughout the world. In races, however, players must use it strategically — each use consumes a limited energy reserve that gradually regenerates over time, adding a layer of skill and resource management to every race.

Sakura Valley – The Dragon's fire breath releases red and orange flames, embodying the region's heat and energy. At higher tiers, it erupts with molten blasts, hurling searing chunks of lava.

Northern Tundra – The Dragon's fire breath unleashes blue ice flames, freezing targets in its path. At higher tiers, it fires deadly ice shards and frost daggers.

Los Solaris – The Dragon's fire breath releases yellow flames, with higher tiers striking out larger and more powerful lightning bolts.

Emerald Forest – The Dragon's fire breath unleashes green flames, with higher tiers releasing toxic plant gas and spreading poisonous spores.

5. Battle and Racing Dragon Log

The introduction of Battle and Race Log features will allow players to analyze their combat and racing histories for strategic improvements, covering engagements from Hunter Tier 1 and Battle Dragon Tier 3 to Raider Tier 2 and Flying and Mythic Dragons in Tiers 4 and 5.

5.1 Battle Log

An accessible Battle Log feature will enable players to meticulously examine their combat history, specifically for Hunter Tier 1 and Battle Dragon Tier 3 engagements. This tool is designed to offer players the opportunity to analyze and refine their battle strategies against past adversaries, enhancing their tactical approaches in future encounters.

5.2 Racing Log

Similarly, a comprehensive Race Log will be introduced, providing players with the ability to review their racing history. This feature focuses on tracking performances of Raider Tier 2 Dragons, as well as those of the Flying and Mythic Dragons in Tiers 4 and 5. The Race Log aims to give players insights into their Dragons' racing capabilities, allowing for strategic improvements and a deeper understanding of each Dragon's performance across various competitions. This expansion ensures players have detailed records of their Dragons' achievements and areas for potential growth in both racing and battle contexts.

6. Dragon Crafting

Throughout the TCG World Metaverse many items and artifacts can be found throughout the World, purchased with Dragon Gold at the Marketplace or secondary sales through the TCG marketplace.

Dragon items include Armor and Ability Items, which include Sakura Valley Scrolls, Los Solaris Ancient Tablets, Emerald Forest Potions, and Northern Tundra Crystals. Collecting rarer Armor provides increased boosts to the Dragon. Similarly, gathering rarer Ability Items also grants enhanced boosts. These boosts Dragon's stats, the progression system rewards players for obtaining items of higher rarity.

6.1 Armor Upgrades & Rarity

In the Dragons armor crafting system, players enhance their Dragon's armor by gathering specific materials, ranked by rarity from Chromium (Common) to Tungsten (Mythic). To craft armor, you need to gather a specific amount of metal fragments from the corresponding rarity metal block for each rarity level. As the rarity of the material increases, so does the quality of the armor, subsequently enhancing their Dragon's statistics.

6.2 Artifacts & Rarity

In the Dragon Artifact crafting system, artifacts are categorized into four distinct groups: Sakura Valley Scrolls, Los Solaris Ancient Tablets, Emerald Forest Potions, and Northern Tundra Crystals. These categories are further broken down into six tiers of rarity, each marked by distinct colors and design details reflecting the artifact's strength and the boost it provides to the player's dragon. The rarity levels, from lowest to highest, are Common (Grey), Uncommon (Green), Rare (Blue), Epic (Purple), Legendary (Orange), and Mythic (Golden).

To enhance their Dragons' fundamental attributes, players are tasked with collecting fragments of these artifacts to assemble a complete piece. These fragments, such as Sakura Valley Scroll pieces, Los Solaris Ancient Tablets sections, Emerald Forest herbs, and Northern Tundra Crystal shards, embody the essence of their origin regions. Gaining proficiency in these artifacts is vital for players, as accumulating each fragment edges them closer to unlocking the maximum capabilities of their Dragons.

7. Dragon Gold

Dragon Gold is the exclusive currency produced by the Dragon Cave Club (DCC) within the game. Players can harvest this gold monthly from their DCC, which is then usable at the various vendor stalls within the Dragon Marketplace. However, Dragon Gold is designated for use with the specific in-game Dragon associated with the player's DCC NFT.

Vendors in the marketplace offer a wide assortment of goods including regional finds, consumables, crafting materials, apparel for avatars, decorative plot items, and a variety of unique and seasonal offerings.

It is important to note that Dragon Gold carries no real-world monetary value and cannot be exchanged or transferred as a gift. Furthermore, Dragon Gold itself is not available for purchase. While items procured with Dragon Gold can be traded on the secondary market, this excludes items that are bound to an account or player.

DCC Amount	DCC Ranking	Ranking Rarity	Dragon Gold per month
5000	5001 - 10000	Common	50
3000	2001 - 5000	Uncommon	125
1500	501 - 2000	Rare	180
400	101 - 500	Epic	210
90	11 - 100	Legendary	250
10	1 - 10	Mythic	300

7.1 Dragon Gold Items

Using Dragon Gold, players can buy Metals and Artifacts at the Dragon Marketplace or via TCG World's Secondary Marketplace. These purchases are for players who wish to fuse or craft these elements into complete items.

Alternatively, players can source these items organically within the game's various regions. For instance, in the Forest region, players might gather herbs to create potions. In the North, the quest might involve collecting Crystal Shards to assemble a full Crystal Cluster. The Asia region may offer the challenge of finding scattered pieces of a scroll to reconstitute, while the East may send players on a hunt for fragments of the Tablets of Wisdom.

The Dragon Marketplace also features Metals of varying quality, which players can use to craft Armor of different rarities or to fuse into complete Armor sets.

8. Dragon Traits and Sets

The DCC collection features 10 distinct trait sets, including TCG, Zombie, King, Platinum, Wizard, Gold, Silver, Bronze, Normal, and Military (noting that some DCC items may mistakenly spell it as "Miltary," yet both variations are categorized under the same trait).

Among these sets, certain traits exhibit dual arm features, such as folded arms or the action of holding an object. For instance, within the Wizard set, there are traits like "Wizard Arms Folded" and "Wizard Holding Wand".

8.1 Wild Card Trait Sets

An In-Game Dragon will be eligible for a Wild Card Trait Set bonus when it showcases a selection of 8 features from a single Trait Set, including instances where there are repetitive features, such as several Silver arms. The allocated amount of Dragon Gold for each Wild Card Trait Set is dependent on the scarcity of the assembled features (refer to the associated table for details).

To activate the Wild Card Trait Set bonus, each type of In-Game Dragon has distinct prerequisites:

- Battle Dragon: Requires a minimum of four features from the same Trait Set within its four DCC NFTs.
- Flying Dragon: Needs to present eight or more features from one Trait Set, utilizing its eight DCC NFTs.

For clarity, consider a scenario where a player has configured eight Dragons to form a Flying Dragon. In this player's DCC NFT lineup, they have secured 8 Gold Traits: specifically, 2 Gold cards, 2 Gold Horns, 1 Gold Skin, and 3 Gold Backgrounds. This ensemble activates the Wild Card Trait Set bonus, resulting in a bounty of Dragon Gold for the player.

Wildcard Trait Set	Battle Dragon Gold	Flying Dragon Gold
TCG	200	400
Zombie	50	100
King	50	100
Wizard	50	100
Military	50	100
Platinum	50	100
Gold	25	50
Silver	25	50
Bronze	25	50
Normal	12.5	25

Additionally, players have the opportunity to create multiple Trait Sets with their DCC NFT combinations.

8.2 Full Flush Trait Sets

Dragons with a Full Flush Trait Set not only receive a monthly Dragon Gold bonus — scaled to the rarity and completeness of their matched traits — but also unlock exclusive cosmetic rewards. A Full Flush is achieved when a Dragon has one trait from each core Trait Group (such as Background, Arms, Mouth, etc.) within their DCC combination.

In addition to the currency boost, any in-game Dragon created using a Full Flush trait set will unlock the matching skin, allowing players to swap their Dragon's default appearance to the completed Full Flush skin.

Rarer trait sets, distinguished by the scarcity of their constituting NFTs, yield a greater bounty of Dragon Gold, mirroring the value of the traits in the broader DCC marketplace. This system incentivizes the collection and strategic combination of rarer traits.

Each Dragon archetype has distinct criteria to qualify for the Trait Set bonus. The specifications for these archetypes are as follows:

- Battle Dragon: Set completed with a combination of four DCC NFTs.
- Flying Dragon: Set completed with eight DCC NFTs to be equipped.
- Mythic Dragon: Set completed with eight to ten DCC NFTs.

Should these Dragons possess all the attributes of the Full Flush Trait Set, the bonus Dragon Gold is secured.

The game's depth is exemplified by the potential for players to create multiple Trait Sets from their DCC NFT collection. For example, a player could assemble a Dragon with a military full flush trait set, while also boasting a bronze full flush set.

Full Flush Trait Set	Battle Dragon Gold	Flying Dragon Gold
TCG	1000	1000
Zombie	200	200
King	200	200
Wizard	200	200
Military	200	200
Platinum	200	200
Gold	100	100
Silver	100	100
Bronze	100	100
Normal	50	50

8.3 Special Feature Bonus

A Dragon Combination that contains 4 or more of the TCG features, laser eyes, Fire Breathe, Military Error card or Dragon Egg receives a Special Feature bonus of 100 Dragon Gold per month. These can include TCG Arms, TCG Background, TCG Suit, Laser Eyes, Fire Breathe, Military Error card, Dragon Egg, TCG Frame, TCG Cap, TCG Horns, TCG Necklace, TCG Mouth, TCG Eyes, TCG Cards, and TCG Skin.

This can be achieved with one DCC NFT; therefore, all in-game Dragons (Tier 1-5) can receive the bonus. (Dragon Gold is Subject to change).

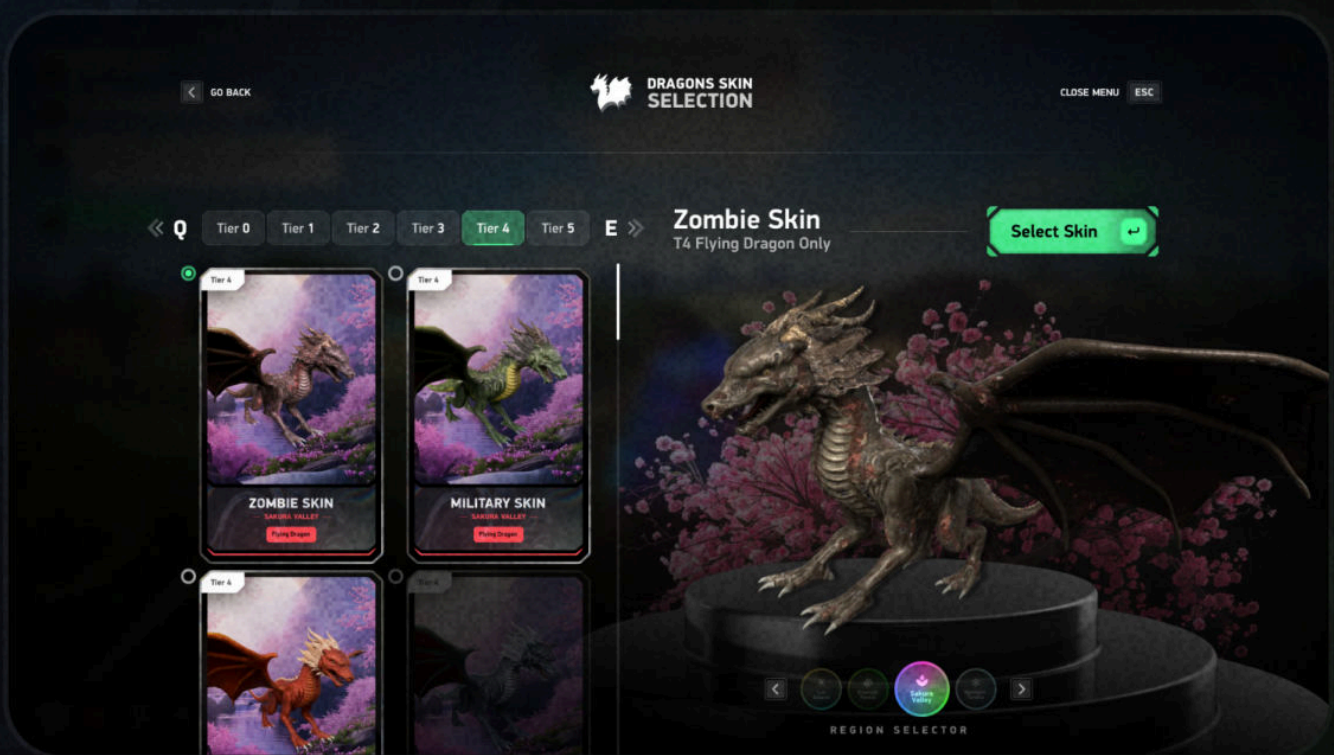

NOTE: All Dragon Gold Monthly Rewards are subject to change in order to find a balanced system for Players.

9. Dragon Skins

Players who own a Full Flush Trait Set using their DCCs will automatically receive a free exclusive skin for their Flying Dragon. This skin will be an account-bound customization and cannot be traded or sold. In addition, all Tier 5 Mythic Flying Dragons will receive the unique and rare TCG Skin, also account-bound and exclusive to this Dragon tier.

To provide additional customization options, players will also have the opportunity to purchase Digital Asset Dragon Skins. These premium skins can be bought, sold, or traded via the TCG Marketplace, offering collectors and players a way to personalize their Dragons while participating in the in-game economy.

Note: The TCG Skin will not be available for Tier 4 Flying Dragons, as it is strictly reserved for the prestigious Tier 5 Mythic class. Skins for the other Tiers are TBA.

10. Trait Set Tables

Trait Group	TCG Traits	King Traits	Zombie Traits
Arms	TCG	King Folded	Zombie Folded

Object	Scepter	Normal Cards
Skin	King	Normal

11. Mythical Nesting Month

The Mythic Nesting Month is an exclusive event, offering all Non-Mythic Dragons (ranked 11-10000) the opportunity to partake in the nesting process with the potential of yielding a Mythic Egg.

This precious Mythic Dragon Egg is bestowed upon a randomly selected Non-Mythic Dragon during the event. Annually, for a duration of nine years, one Mythic Dragon egg is awarded.

Mythic Dragons are ineligible to produce a Mythic Egg. To qualify, a Dragon must be engaged in the nesting process throughout the Mythic Nesting Month and fulfill weekly tasks to maintain their happiness. Dragons not awarded the Mythic Egg are still capable of producing a Dragon Egg annually, containing various rewards and prizes.

After a Dragon secures a Mythic Egg, it is disqualified from winning another Mythic Egg in the future. The Mythic Egg can be either sold or paired with a 8 DCC NFTs to awaken the Mythic Flying Dragon.

Additionally, the Nesting DCC NFT may integrate into an In-game Dragon narrative.

12. Dragon Eggs

Each year, DCC NFT holders are rewarded with an exclusive Dragon Egg — a special gift recognizing their ongoing commitment and participation within the ecosystem.

These Dragon Eggs contain a diverse range of valuable rewards, offering both utility and collectability. Inside, holders may find TCG Tokens, rare in-game items, exclusive cosmetics, or a variety of digital assets designed to enhance their gameplay experience or expand their collection.

Every egg is a chance to unlock something unique — from currency boosts to limited-edition assets — making them a highly anticipated annual reward for dedicated members of the Dragon Cave Club community.

13. Dragon Nesting

Deep within the waters of ancient lakes, rivers, and oceans lies the origin of the Sea Dragons—mighty descendants of revered Dragon Ancestors. This powerful aquatic bloodline is hidden within the top 500 Dragons of the Dragon Cave Club (DCC), waiting to be reawakened. Through a specialized nesting process, players have the opportunity to unlock this dormant legacy.

When initiating the nesting phase with a top 500 Dragon, players can choose from different durations, each requiring weekly tasks to ensure the dragon remains peaceful and the process stays on course.

The outcome of nesting is influenced by both the dragon's rarity—Mythic, Legendary, or Epic—and the length of the nesting period. Together, these factors determine the chances of summoning a Sea Dragon of varying rarity, ranging from Common to Mythic.

13.1 Sea Dragons

There will be four regional Makaras that players can unlock, each representing a distinct area: Sakura Valley, Northern Tundra, Los Solaris, and Emerald Forest. The starting rarity of these Makaras will determine their base stats, with rarities ranked as follows, from weakest to strongest: common, uncommon, rare, epic, legendary, and mythic.

The Sea Dragon starting Base Stats are influenced by its Rarity which is determined from the DCC nesting to create it; and its abilities encompass the following set of attributes: Health Points (HP), which bolster the Dragon's total health for increased damage resilience; Speed (SPD), improving its mobility across the water; Stamina (STA), expanding its endurance for prolonged activities and quicker recovery; Agility (AGI) – Enhances the Dragon's maneuverability, improving dodging, quick turns, and fluid movement in dynamic situations. Inventory (INV) – Expands the Sea Dragon's carrying capacity, allowing it to hold more items, resources, or loot during travel and missions.

14. Dragon Customization

All Tier 1–5 in-game Dragons are fully customizable, giving players the freedom to create and evolve their perfect Dragon.

For Tiers 2–4 Dragons — including Flyers, Battlers, and Raiders — players can utilize interchangeable DCC NFT combinations to upgrade their Dragons. Acquiring higher-ranked combinations not only enhances their Dragon's performance but also increases their Dragon Gold earnings, which can be exchanged for further upgrades.

Players can also purchase exclusive accessories, skins, and wearables — all tradeable on the TCG Marketplace — allowing for deeper customization and player-driven trading.

Additionally, the Dragon Customizer tool lets players personalize their Dragons across all Tiers. This includes swapping skins, equipping unique accessories, and upgrading armor to improve stats — ensuring every Dragon stands out in both style and strength.

15. Dragon Island

The top 2000 Dragons, classified as Mythic, Legendary, Epic, and Rare, are entitled to a Dragon Nest on Dragon Island.

Mythic Dragons inhabit Mythic Mountain, with the highest-ranked dragons residing at the peak and gradually descending in rank as you move down the mountain, culminating with rank 100 at the base. The remaining top 500 Dragons will be assigned nests along the island's perimeter, providing breathtaking views of the surroundings.

Centrally positioned, the Dragon Portal acts as the heart of the island, with the higher-ranked Dragons, up to rank 2000, situated close to this hub, and the positioning radiates outwards with descending ranks.

Ownership of Dragon Nests is intrinsically linked to the original DCC NFT, implying that the Nest's deed and access rights are transferred along with the Dragon. These Nests provide various utilities, notably regenerative abilities that facilitate the healing of Dragons post-combat. Additionally, there's the option for Nest owners to lease out their Nests for their utility to other players within TCG World, enhancing their strategic value.

16. Dragon Rentals

Players can choose to lease their Battle and Flying Dragons to other TCG World users so they can experience the in-game utility and have a chance to earn.

These in-game Dragons will be featured on the Asset Rental section of the Marketplace where users can view the Dragons Accessories, Level and Stats.

Once the renter chooses the Dragon they want, the duration of the lease can then be selected. Renters are then required to pay the total rental fee upfront in TCGs Token with TCG receiving a 5% Fee. Once the tokens have been received in the smart contract, only then will the renter be given access to the In-game Dragon.

The Marketplace will offer tiered listing options for greater exposure.

17. Summary

The 10,000 Dragon Cave Club (DCC) are NFTs that were minted on the Ethereum blockchain and usable in TCG World Metaverse for the use of in-game dragons.

This collection can be purchased via OpenSea
<https://opensea.io/collection/tcg-world-dragons>

We look forward to seeing you in the TCG World Metaverse.
